

About Resilience

Navigating risk to engender more sustainable business models is at the heart of what we do at Resilience. Our technology; Enterprise Resilience™ and Climate Resilience™, is founded on over a decade of influential frameworks pioneered by the Centre of Risk Studies at the University of Cambridge Judge Business School.

At Resilience we put the power of risk science in the hands of global enterprises; translating data into actionable insights that enable companies to identify opportunities, future-proof business strategy and protect investor interests.

The multidisciplinary Resilience team sits at the cross section of academia, corporate risk management and sustainability, and, powered by our technology, delivers a complete picture to enable major global enterprises to mitigate the financial impact of tomorrow, while taking advantage of the opportunities today.

Our heritage is rooted in science

Through our technology, we apply the research frameworks pioneered by the Centre for Risk Studies at the University of Cambridge Judge Business School.

About the Resilience team

Our multidisciplinary, diverse and passionate team of richly talented individuals has deep academic roots, with a quarter of the company holding a PhD, including world-leading researchers in climate science, economics, applied mathematics and corporate finance.
